GHILOTH MANUFACTURING UNIT
B-337, RIICO Industrial Area, Ghiloth
Neemrana, Rajasthan - 301705, India

Manufacturing partnerships. Built for the long term.

Jassco Steel Private Limited is an Indian manufacturer of specialised industrial fabrication, perforated sheets, expanded mesh, cable trays and fabricated metal products. Active in metal perforation since 1990, the company has built its reputation through longstanding customer relationships and its own manufacturing facilities.

We support requirements ranging from individual fabricated metal parts to fully assembled products. Our business serves OEMs, fabricators and point-of-purchase applications, directly and indirectly supporting the supply chains of major brands.

Our capabilities include design and engineering support, CNC punching and forming, laser cutting, welding, perforating, assembly, finishing, packaging and fulfilment. We continue to invest in production quality and efficiency, with a focus on continuous improvement, consistent products and dependable delivery.

Sheet metal processing, component manufacturing and fabricated products - brought together under one manufacturing programme.

From material to finished component.

Specialist metal processing and fabrication capabilities for diverse industrial and commercial requirements.

01 **Sheet metal cutting**

Precision profiles and blanks produced through laser cutting, perforation, and shearing.

02 **Metal forming**

Bending,rollin, ganding of sheet metal to create complex shapes and functional components.

03 **Welding**

Joining capabilities include TIG, MIG, argon, laser and spot welding, selected to suit the component and finish.

04 **Punching & perforating**

Accurate holes and repeatable patterns to meet functional, ventilation, screening and aesthetic requirements.

05 **Expanded metal**

Slittingand stretching sheet metal into an interconnected open-grid structure for lightweight, versatile products.

Assembly, finishing, packaging and fulfilment complete the manufacturing offering.

A complete view.
A connected facility.

GHILOTH MANUFACTURING UNIT

B-337, RIICO Industrial Area, Ghiloth
Neemrana, Rajasthan - 301705, India

8,000
SQ MTR

TOTAL FACTORY AREA

A shared purpose.
A long-term direction.

OUR MISSION

To work as a true business partner and grow from strength to strength with our customers, supporting broader and more innovative applications.

OUR VISION

To be a trusted leader in precision sheet-metal manufacturing, recognised for quality, innovation, dependable delivery and lasting customer partnerships.

PARTNERSHIP

Grow with our customers.

PRECISION

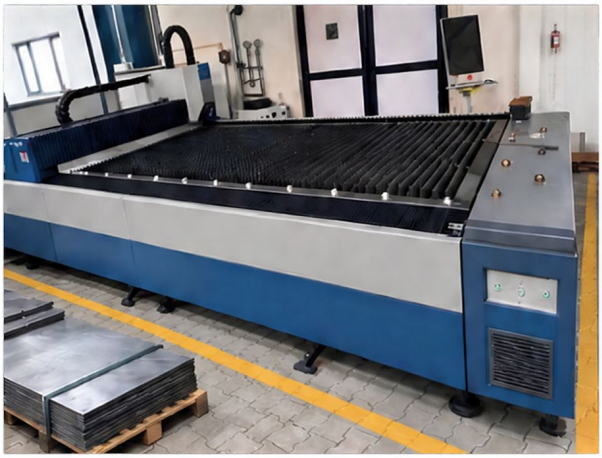
Improve quality and consistency.

PROGRESS

Invest in better processes.

Production capability.

01 Fiber laser cutting



Type	Laser cutting machine
Power	2 kW
Bed size	1,500 x 3,000 mm
Use	Sheet cutting from DXF
Quantity	1

02 CNC hydraulic bending

Type	3-axis bending machine
Thickness capacity	Up to 8 mm
Sheet width	4,000 mm
Use	Sheet bending
Quantity	1

Production capability.

03 CNC hydraulic bending

Type	3-axis bending machine
Thickness capacity	Up to 10 mm
Sheet width	3,000 mm
Use	Sheet bending
Quantity	1

04 NC pneumatic shearing

Type	Shearing machine
Thickness capacity	Up to 2.5 mm
Sheet width	2,500 mm
Use	Sheet shearing
Quantity	1

Production capability.

05 NC hydraulic shearing

Type	Shearing machine
Thickness capacity	Up to 6 mm
Sheet width	3,000 mm
Use	Sheet shearing
Quantity	1

06 Cut-to-length lines

Type	Automatic shearing
Line A	Up to 3 mm / 1,300 mm wide
Line B	Up to 2 mm / 1,000 mm wide
Use	Sheet shearing
Quantity	2 (1 of each)

Production capability.

07 CNC pneumatic perforation

Type	Perforation machine
Thickness capacity	Up to 3 mm
Sheet width	1,280 mm
Use	Sheet perforation
Quantity	1

08 Mechanical perforation

Type	Perforation machine
Thickness capacity	Up to 5 mm
Sheet width	1,280 mm
Use	Sheet perforation
Quantity	4

Production capability.

09 CNC perforation

Type	Perforation machine
Thickness capacity	Up to 3 mm
Sheet width	1,000 mm
Use	Sheet perforation
Quantity	1

10 Mechanical perforation

Type	Perforation machine
Thickness capacity	Up to 1.5 mm
Sheet width	500 mm
Use	Sheet perforation
Quantity	7

Production capability.

11 Mechanical expanding

Type	Expanded metal machine
Thickness	Up to 2.5 mm
Sheet width	1,250 mm
Use	Sheet expanding
Quantity	3

12 CNC vertical machining centre

Bed size	1,600 x 700 mm
Tool magazine	24 tools
Spindle speed	12,000 rpm
Controller	Mitsubishi M80A
Use	Tool, die and component machining
Quantity	1

Production capability.

13 CNC vertical machining centre

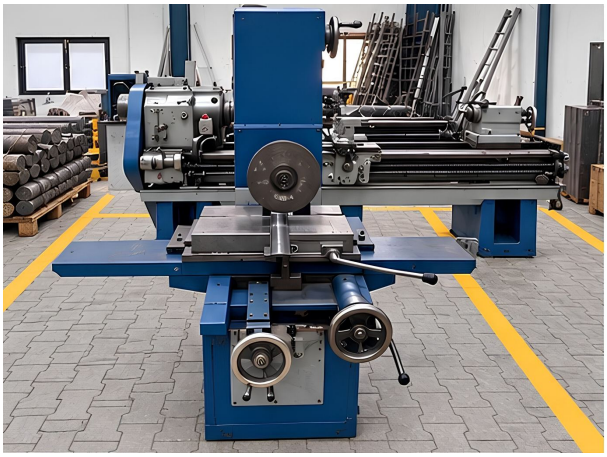
Bed size	800 x 400 mm
Tool magazine	20 tools
Spindle speed	12,000 rpm
Controller	Delta
Use	Tool, die and component machining
Quantity	1

14 Surface grinder

Type	Grinding machine
Bed size	1,000 x 400 mm
Stone size	Ø 360 x 50 mm thick
Use	Upper surface grinding
Quantity	1

Production capability.

15 Surface grinder



Type	Grinding machine
Bed size	350 x 150 mm
Stone size	Ø 200 x 15 mm thick
Use	Upper surface grinding
Quantity	1

16 Mechanical lathes

Bed size 1	4,200 x Ø 1,000 mm
Bed size 2	3,000 x Ø 400 mm
Bed size 3	1,800 x Ø 200 mm
Use	Component turning
Quantity	3

Production capability.

17 SPM linear welding

Type	Hydraulic linear welding machine
Weld length	1,000 mm
Use	Argon welding
Quantity	3

18 Pulse welding

Type	Argon welding machine
Thickness	Up to 3 mm
Use	Argon welding
Quantity	2

Production capability.

19 MIG welding

Type	MIG welding machine
Thickness	Up to 10 mm
Use	Wire-feed welding
Quantity	5

20 Pneumatic seam welding

Type	Pneumatic transformer welding
Thickness	Up to 2 mm
Use	Seam / overlap welding
Quantity	1

Production capability.

21 Automatic slip rolling

Type	Rolling machine
Feeding width	1,300 mm
Use	Sheet rolling
Quantity	2

22 Mechanical power presses

10-ton presses	6
5-ton press	1
65-ton pneumatic	1; high-speed
Use	Cutting, punching and blanking
Listed total	7; capacity breakdown totals 8*

Production capability.

23 Hydraulic pipe bender

Type	Pipe bending machine
Thickness	Up to 5 mm
Use	Pipe profile bending
Quantity	1

24 Hexa / saw cutter

Type	Saw cutting machine
Listed capacity	Up to 400 x 100 mm
Use	Parting solid metal
Quantity	1

Production capability.

25 EOT overhead cranes

Type	Overhead crane
Capacity 1	5 ton - 1 crane
Capacity 2	12 ton - 1 crane
Quantity	2
Use	Material handling*

INTEGRATED PRODUCTION SUPPORT

Material movement.

Process continuity.

Internal lifting supports the movement of metal stock, work in progress and finished assemblies.

FINISHING / IN-HOUSE FACILITY

In-house powder coating.

An integrated finishing stage for fabricated metal products.

AI-generated powder-coating plant illustration

Powder coating complements the sheet metal fabrication process, bringing component manufacture and surface finishing within the same production programme.

TYPICAL PROCESS SEQUENCE

01	02	03	04
Surface preparation	Powder application	Curing	Final inspection

EXPLORE THE CATALOGUE

The range.

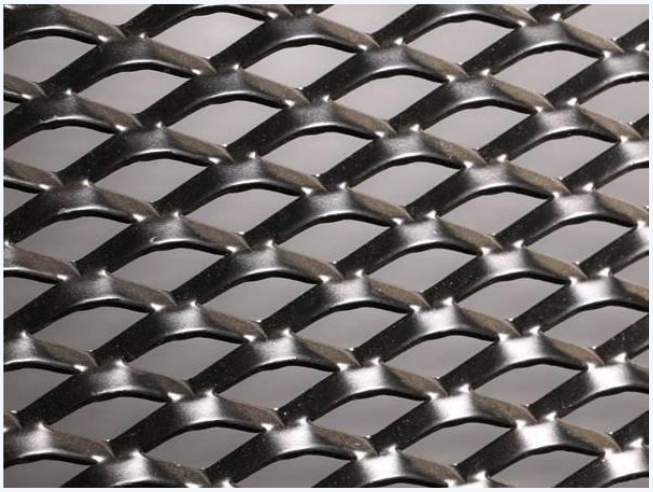
Products and manufacturing capabilities in one focused catalogue.

01	Perforated & expanded sheets	21
02	Perforated & expanded tubes	22
03	Cable trays	23
04	Sheet metal components	24
05	Laser-cut components	25
06	CNC turned components	26
07	Fabricated products	27
08	Industrial racks	28
09	Noise barriers	29

Sheets & coils.

37 YEARS OF EXCELLENCE

Perforated sheet, coil and expanded-mesh solutions.



PERFORATED SHEETS & COILS

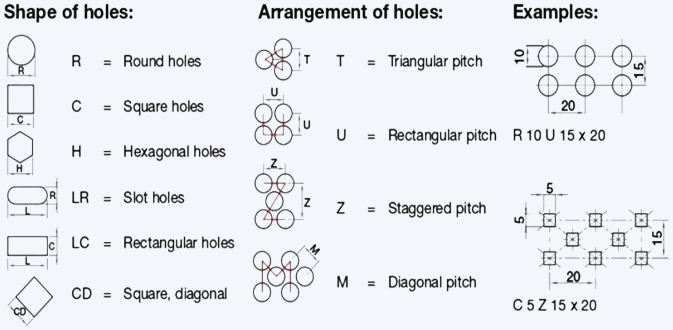
Punched metal patterns for screening, ventilation, drainage and architectural applications. Round, square, slotted, hexagonal and decorative patterns can be specified.

EXPANDED MESH

Slit-and-stretched metal with interconnected diamond openings. Standard raised, flattened and grating forms provide open area for visibility, airflow and light.

MATERIALS & APPLICATIONS

Mild steel, stainless steel, aluminium, copper and brass, as applicable. Uses include facades, sunshades, guards, screens, acoustic assemblies and filtration supports.



Selection details
Material grade, thickness, sheet or coil size, hole size, pitch and open area. For expanded mesh: strand width, mesh pitch and orientation.

Tubes & formed mesh.

37 YEARS OF EXCELLENCE

Tubular solutions for filtration, Ventilation, Protection and engineered assemblies.

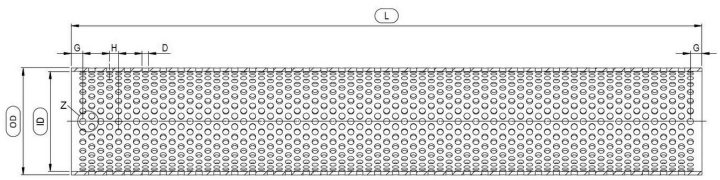
PERFORATED TUBES

Round, square or rectangular sections made from perforated metal. Specify hole pattern, non-perforated margins, tube geometry and joining requirements.

EXPANDED METAL TUBES

Expanded mesh formed into tubular sections for filter supports, ventilation, guards and industrial assemblies. Define mesh geometry, strand dimensions and seam details.

DRAWING & ORDERING DETAILS

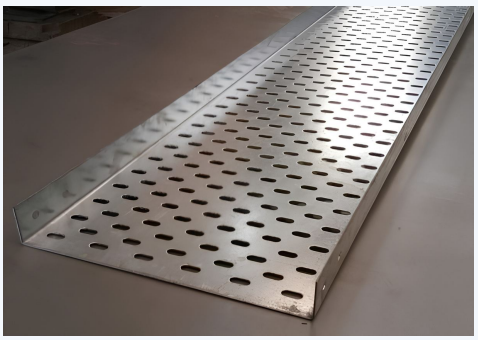


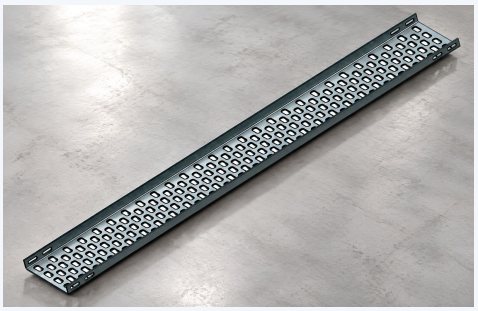
OD: outside diameter
ID: inside diameter
L: length / G: plain margin
D: hole diameter / X1: pitch

Cable trays

37 YEARS OF EXCELLENCE

Organised cable routing for industrial spaces.





Metal tray systems support and route cables in factories, commercial buildings, data centres and infrastructure installations.

OPTIONS & CAPABILITIES

• Ladder, trough and perforated tray configurations • Mild steel, galvanised steel, stainless steel and aluminium options

• Elbows, tees, reducers, brackets and hangers to project needs

TYPICAL APPLICATIONS

• Electrical distribution and process facilities

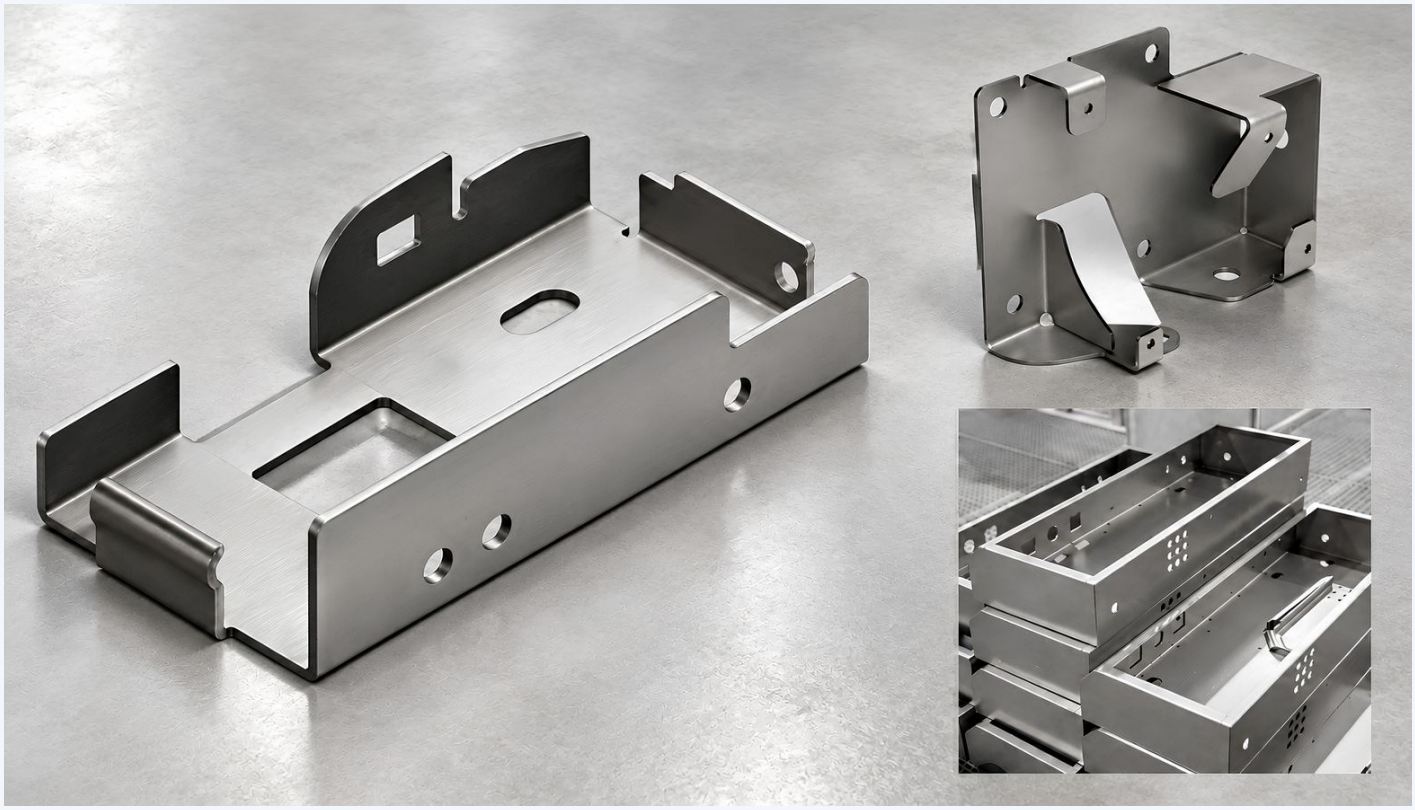
• Commercial buildings and data centres

• Power, utility and telecommunications installations

Sheet metal components

37 YEARS OF EXCELLENCE

From flat sheet to functional component.



Cut, punched, bent and welded parts for equipment manufacturers, building services and general engineering applications.

OPTIONS & CAPABILITIES

• Stamping, bending, forming and assembly

• Brackets, panels, housings, guards, jigs and fixtures • Materials and finishes matched to the application

TYPICAL APPLICATIONS

• Automotive parts and equipment assemblies

• HVAC ductwork, cladding and construction components

• Appliances, electronics, furniture and machinery

Laser-cut components

37 YEARS OF EXCELLENCE

Complex profiles. Cleanly defined geometry.

Profiled metal components produced from digital drawings, supporting repeatable shapes and flexible part design.

OPTIONS & CAPABILITIES

- Fiber laser cutting capability: 2 kW
- Machine bed: 1,500 x 3,000 mm
- Cutting profiles prepared from DXF files

TYPICAL APPLICATIONS

- Brackets, plates and precision-profiled blanks
- Automotive, industrial and electrical components • Decorative metalwork and fabricated assemblies

CNC turned components

37 YEARS OF EXCELLENCE

Repeatable geometry for engineered assemblies.

Turned components made by rotating the workpiece against cutting tools to produce cylindrical profiles and detailed features.

OPTIONS & CAPABILITIES

- Turning, facing, drilling, boring and threading
- Shafts, pins, sleeves, spacers and custom turned parts
- Material and tolerance requirements to approved drawings

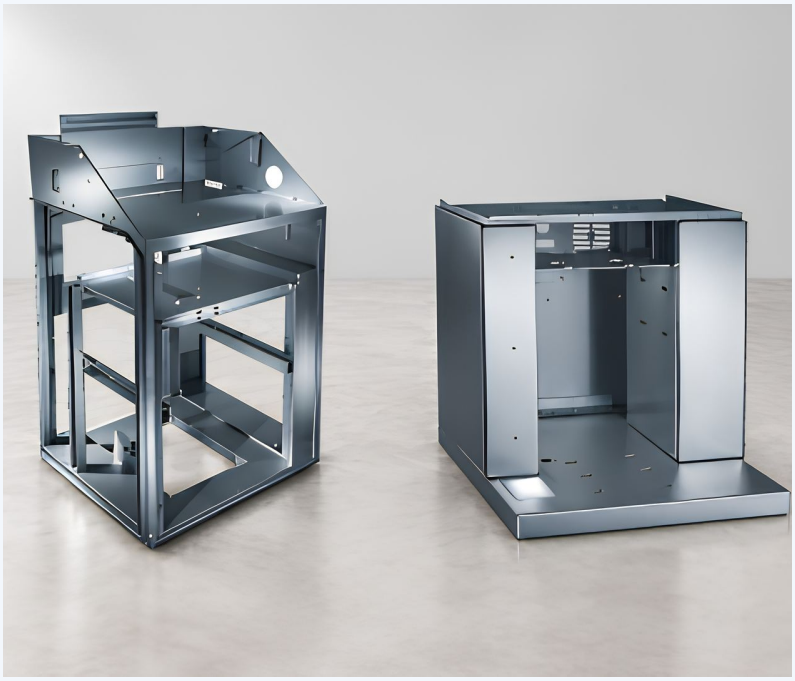
TYPICAL APPLICATIONS

- Automotive and general engineering
- Pumps, valves and mechanical assemblies
- Electrical, electronics and precision equipment

Fabricated products

Individual parts. Integrated assemblies.

37 YEARS OF EXCELLENCE



Sheet metal fabrication brings cutting, bending, forming and welding together to produce application-specific metal products.

OPTIONS & CAPABILITIES

• MIG, TIG/argon, spot and laser welding capabilities described in the profile

• Frames, supports, guards, panels, chutes and hoppers

• Assembly, finishing and packaging support

TYPICAL APPLICATIONS

• Industrial machinery and equipment enclosures

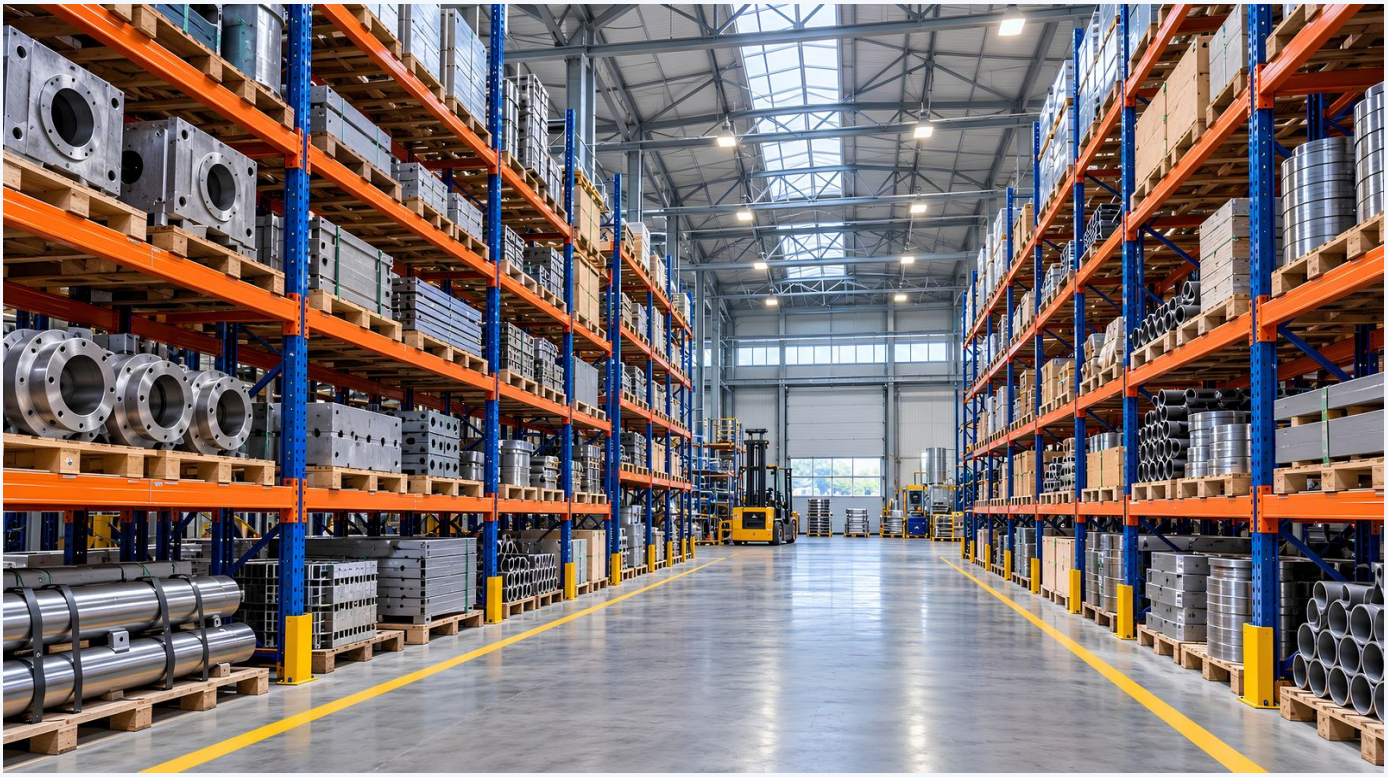
• Electrical cabinets and appliance housings

• Construction, furniture and general manufactured products

Industrial racks

37 YEARS OF EXCELLENCE

Storage shaped around operational needs.



Metal storage systems for warehouses and factories, configured around the goods stored, available space and handling method.

OPTIONS & CAPABILITIES

- Pallet and cantilever rack configurations
- Mezzanine, mobile and gravity-flow concepts
- Arrangement and structural requirements to project design

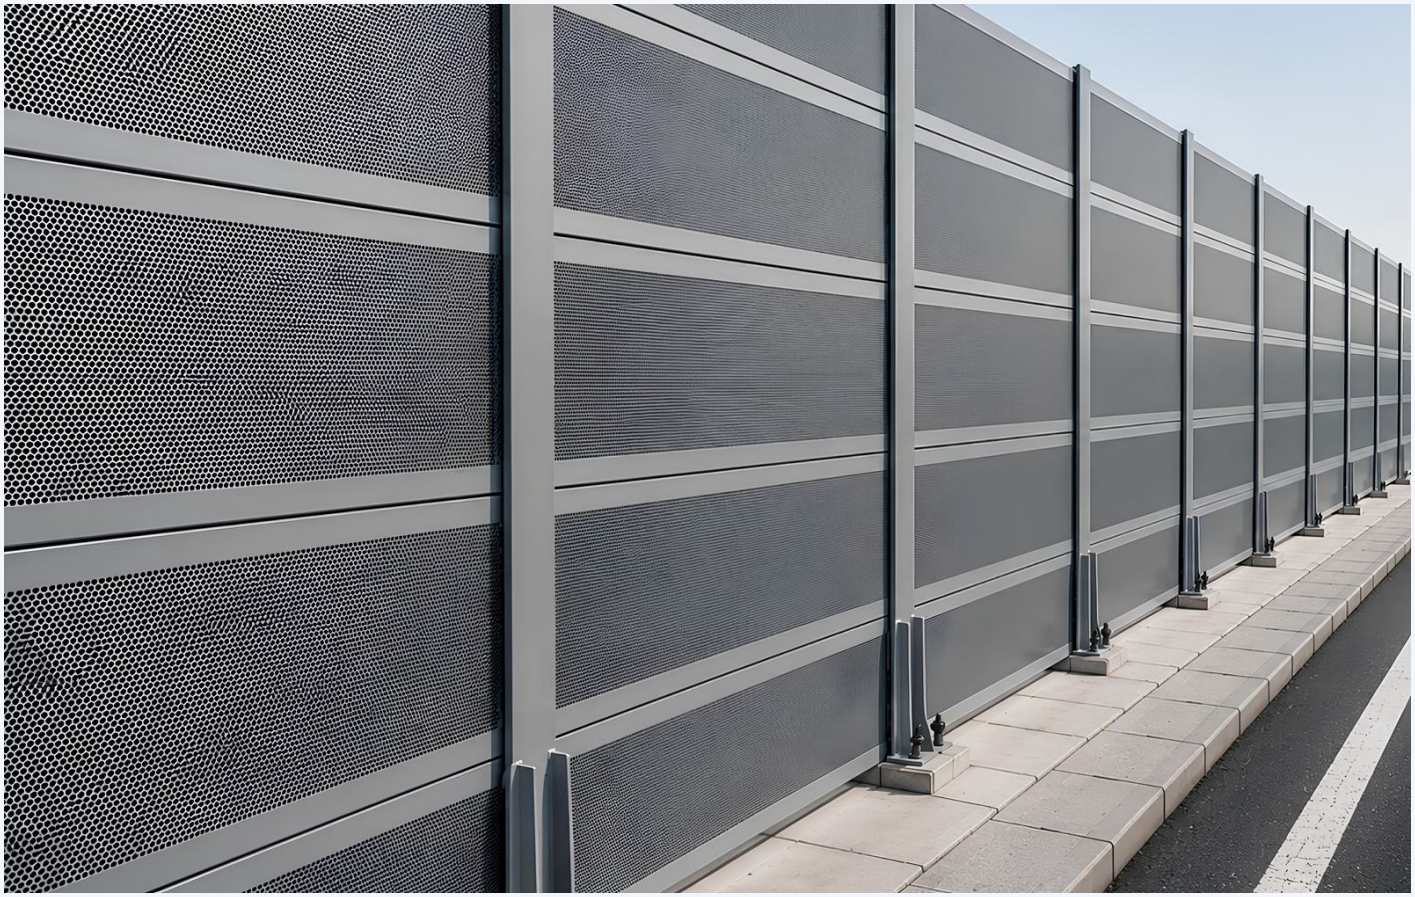
TYPICAL APPLICATIONS

- Palletised stock and warehouse inventory
- Long materials, pipes and sheet storage
- Parts storage, picking and manufacturing support

Noise barriers.

37 YEARS OF EXCELLENCE

Modularmetal-panelsolutionsforenvironmental and industrial noise control.



A continuous barrier positioned between a noise source and a sensitive area to help limit sound transmission. Panel design, installation and site geometry determine the achieved performance.

TYPICAL PANEL CONSTRUCTION

Perforated metal facing + sound-absorbing infill, such as mineral wool or equivalent + solid backing sheet. Modular panels are assembled within a supporting structure to form a continuous barrier.

JASSCO STEEL PRIVATE LIMITED

UTILITY SERVICES

JASSCO

MEP INSTALLATION

- HVAC
- ELECTRICAL
- FIRE SYSTEMS
- ACOUSTICS

Integrated MEP solutions, engineered for performance, safety, and reliability.

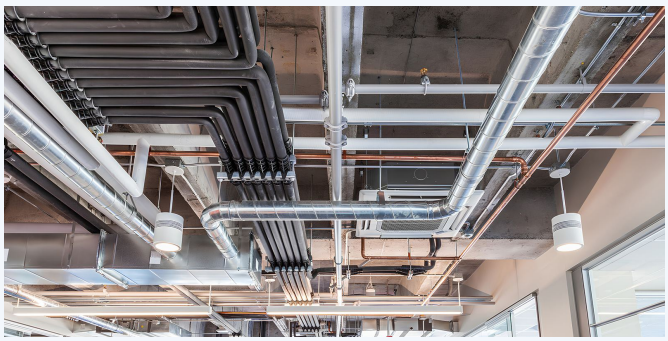
HVAC Systems

Chillers•Piping•Ductwork•Pumps•Cooling Towers

JASSCO's MEP services vertical supports coordinated HVAC installation, testing and commissioning for industrial and commercial facilities, from equipment placement to system handover.

01 / CHILLER INSTALLATION

Equipment positioning, bases and vibration isolation; chilled-water connections, insulation, electrical and control interfaces.



02 / DUCT & PIPE INSTALLATION

Duct fabrication and installation, hangers and supports, dampers, insulation and coordination with ceiling and other services.

03 / CHILLED-WATER PUMP INSTALLATION

Pump and base installation, alignment, piping, valves, strainers, instrumentation and vibration isolation.

04 / COOLING-TOWER INSTALLATION

Cooling-tower placement, support bases, condenser-water connections and coordination of fan drives and controls.

INSTALLATION TESTING & COMMISSIONING

Pressure testing and flushing • Air and water balancing • Quality check, Functional checks.

Electrical Installation

A coordinated electrical installation service covering power distribution, equipment controls and cable containment, aligned with approved drawings and project specifications.

01 / INSTALLED POWER-PANEL LINE-UP

02 / CONTROL-PANEL WIRING DETAIL

03 / CABLE-TRAY INSTALLATION

CONTROL & POWER PANELS

Installation of power-distribution panels, MCCs, VFD and control panels. Scope includes positioning, alignment and anchoring; cable glanding and termination; earthing and identification; control wiring and interlock checks. Inspection and commissioning follow approved drawings and manufacturer instructions.

CABLE TRAYS & CABLES

Tray and ladder installation with brackets and supports; coordinated routing, cable pulling, dressing, segregation, tagging and termination.

TNSTALLATION TESTING & COMMISSIONING

Continuity and insulation checks • Phase sequence • Control interlocks • Functional trials

Firefighting & Separation

Installation services for firefighting networks and fire separation, coordinated with approved fire strategies, specified system details and the requirements of the relevant authority.

01 / FIRE-PUMP & PIPE WORK INSTALLATION

FIREFIGHTING INSTALLATION

Fire pumps and associated piping, hydrant and hose-reel networks, sprinkler pipework, valves, supports and equipment identification, as specified.

02 / FIRE PARTITION & SEALED PIPE OPENINGS

FIRE SEPARATION & FIRESTOPPING

Installation of fire-rated partitions and barriers to maintain compartmentation. Seal pipe, cable and duct penetrations and construction joints using specified tested systems. Coordinate fire doors and dampers, inspect perimeter seals and fixings, and document completed firestop locations for handover.

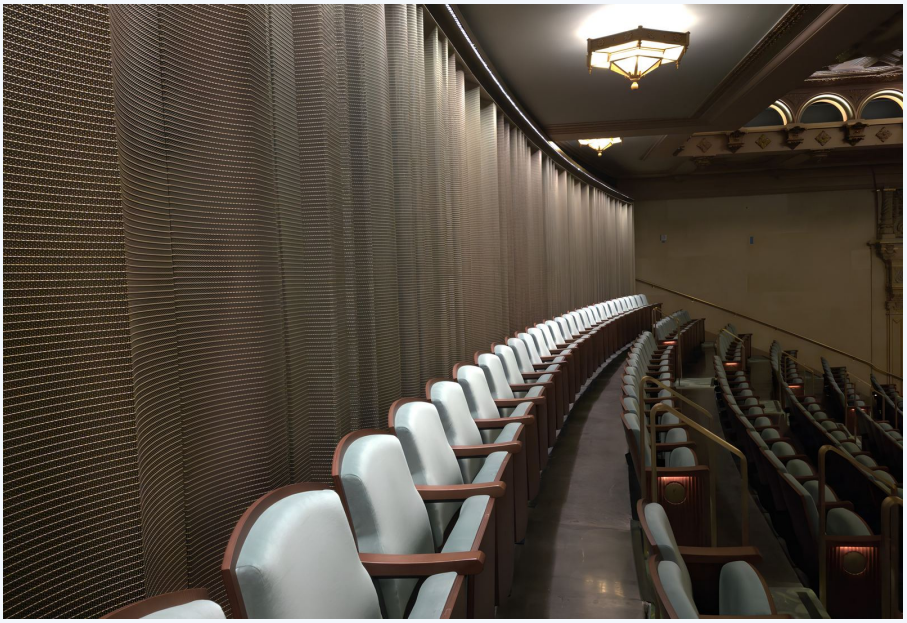
NSTALLATION TESTING & COMMISSIONING

Pressure and flow tests • Pump and valve checks • Alarm-interface trials • Firestop Inspection records

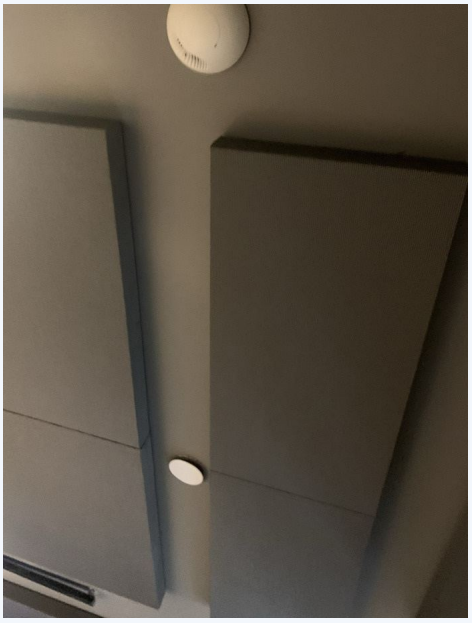
Acoustic Lining

Auditoriums•TestFacilities•HVAC&Plant Rooms

Acoustic lining for auditoriums, test facilities and building services, using specified absorptive materials, suitable facings and coordinated wall, ceiling and enclosure details to meet the project acoustic design.



01 / AUDITORIUM ACOUSTIC WALL LINING



02 / CEILING & WALL ACOUSTIC PANELS

AUDITORIUM ACOUSTICS

Wall and ceiling acoustic lining, absorptive panels, baffles and specified reflective finishes to control reverberation and support speech clarity. Coordinated fixing, joint detailing and integration with lighting and HVAC services.

TEST-FACILITY ACOUSTICS

Acoustic lining for equipment test rooms, test cells and acoustic enclosures, including specified absorptive infill, protective facings, doors and ventilation silencers. Treatment selected for the noise source and intended test conditions.

NSTALLATION TESTING & COMMISSIONING

Material and fixing inspections • Reverberation / noise checks, as specified • Verification against agreed criteria

Vehicle Test Acoustics

Acoustic treatment for vehicle and component test facilities, supporting noise, vibration and harshness (NVH) evaluation. Wall and ceiling lining is coordinated with the chamber design, test equipment and required measurement conditions.

01 / REAL VEHICLE ACOUSTIC TEST CHAMBER - WALL & CEILING ABSORBERS

WALL & CEILING TREATMENT

Installation of specified absorptive lining, modular acoustic panels or anechoic wedges to reduce sound reflections. Coordinate infill, facings, support frames, joints and edge protection with the acoustic design. Sound-isolating wall construction is specified separately to control noise transmission.

TEST-CELL INTERFACES & FINISHING

Coordinate acoustic doors, sealed cable and pipe penetrations, ventilation silencers and exhaust interfaces. Retain vehicle clearance and access to test equipment. Verify lining dimensions, fixing quality and seals; chamber acceptance is checked against the agreed acoustic test requirements.

NSTALLATION TESTING & COMMISSIONING

Lining & seal inspections, Background-noise checks, Chamber acoustic verification, as specified
